

README

What is Cloud 4.0

Cloud 4.0 aims to centralize and integrate many of the applications found in the docker-compose stack. This will allow for users to have a unified experience across many different services and improve synergy amongst a variety of different types of services.

Although the downtime for these services should be **minimal**. Developers who are relying on these services should plan for these services to go down at any time.

Services Being Replaced in Cloud 4.0

- Bitwarden
- Nextcloud
- Password Self Service
- Wordpress (Frontend and Blog)
- Guacamole

Services Being Added in Cloud 4.0

- Messaging/Chat
- Registry Service
- General developer API
- KeyCloak

Services Not Removed in Cloud 4.0

- Gitea
- Fusion Idap Directory
- Bookstack
